

The FACE Core Assessment & Outcomes Package for Health & Social Care V.6

V.6 of the FACE Toolset is the world's first comprehensive, integrated toolset for use across health and social care. The FACE tools facilitate high quality and proportionate assessment, planning and review processes across community, residential and hospital settings. The toolset has been adopted in over half of the UK and is the product of 20 years' development work including: review of national and international datasets and guidelines; dialogue with hundreds of senior professionals; extensive use and feedback by all professional groups; and input from both service users and carers.

V.6 of the FACE Toolset Supports

- Outcome measurement
- Resource allocation
- Integrated care and support planning
- Personalisation and self-directed support
- Person-centred holistic assessment & CAF
- Long-term conditions management
- Re-ablement/rehabilitation

Using the tools

Our job description includes not just producing the tools but helping you to use them as effectively as possible. We support your use of the tools through:

- Introductory workshops
- Training sessions and events
- Accredited training for 'expert users'
- Regular user group meetings
- Our website's Customer area
- Networking with the FACE community
- Implementation support offered by senior FACE personnel with a strong background in health and/or social care

Core Tools

The Core Assessment tools support proportionate holistic assessment and collation of the key information necessary to inform decisions on care and support planning, the need for specialist assessment and the needs of carers.

The Overview is nationally-accredited by the Department of Health and used in over 50% of the UK. It enables calculation of an indicative budget using the FACE Resource Allocation System as well as supporting CAF and multi-agency working.

The Core Tools include:

- BICA (Background Information and Contact Assessment)
- Overview/Overview (care homes)
- Self-assessment
- Carers Assessment/Self-assessment
- Carers Front Sheet

Complex Needs Tools

These tools inform decision making for people with complex health needs and/or issues surrounding mental capacity and eligibility for continuing care.

They meet all key legal requirements and can be used standalone or in conjunction with other FACE tools.

Complex Needs Tools include:

- Complex Needs Supplement
- Mental Capacity Assessment
- DoLS

Specialist Tools

Developed with specialist practitioners, these in-depth tools may either be used standalone or in conjunction with the Contact and/or Overview Assessment.

Simple outcome measures are embedded within many of the tools thus enabling outcomes to be measured as an integral part of the assessment and review process.

Specialist Tools include:

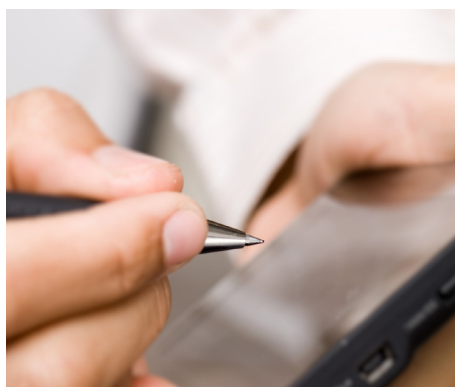

- Falls Assessment
- Continence Assessment
- Moving and Handling Assessment
- Sensory Assessment
- Occupation and Activities Assessment
- Communication Assessment
- Swallowing Assessment
- Physiotherapy Assessment
- Home Environment Description
- Welfare Benefits Check

Telecare Tools

These tools provide a standard documentation set for telecare, from evaluation, prescription and installation right through to incident monitoring and user feedback.

Telecare Tools include:

- Telecare evaluation, prescription and referral
- Response sheet
- Incident record/review form
- Feedback forms

Long-term Conditions Tools

The FACE Long-term Conditions tools are concise, evidence-based clinical supplements for use standalone or in conjunction with the Contact and/or Overview Assessment.

The tools support the Department of Health's policy of 'Transforming Community Services for People with a Long-Term Condition' and use a common set of headings and a consistent approach to self-management.

Long-term Conditions Tools include:

- Cardiac Assessment
- Cardiac Rehabilitation Record
- Diabetes Assessment and Diary
- Epilepsy Assessment
- Seizure Diary, Seizure Questionnaire
- Movement Disorders Assessment
- Respiratory Assessment, Asthma Diary

Planning & Review Tools

Planning, review and progress monitoring follow naturally from assessment and the provision of care and support. The planning and review tools may be pre-populated from FACE assessments and support holistic inter-agency working, information-sharing and outcomes analysis.

The tools provided are:

- Integrated Care and Support Plan
- Plan Approval
- Outcomes-focused Review Form
